

Figure 1: Dimensions of test track

The track is divided into 7 straight sections and 6 turning zones, each with different properties.

Table 1: Properties of the straight sections

SECTION:		LENGTH:
A	Acceleration from standstill	6.0 m
B	Constant velocity of 5 m/s	37.4 m
C 1-3	Crossing of the gutters	-
D	Coasting, no pedaling or braking	10.4 m
E	Braking to standstill	10.0 m

Table 2: Properties of the turning sections

SECTION:	
1	Right, radius of 2m
2	Right, radius of 3m
3	Zigzag, radius of approximately 1m
4	Left, radius of 2m
5	Left, radius of 3m
6	Right, radius of 2m

To accurately control the radius of the turns and the overall route the bicycle takes, cones are placed along the radius of every turn and at the start and end of the track. Figure 2 shows the track with cones depicted as orange dots and every turn and straight section labeled according to Table 1 and Table 2.
